MARINE MARBLES

Marine Marbles is a fun and engaging game designed specifically for children who have difficulty with fine motor skills. The interchangeable bottoms and handles make it adaptable, enabling users to progress at their own pace. This game can be used in occupational therapy as a tool to strengthen fine motor skills. There is no winning or losing this game, simply have fun and try to roll the marble through all of the obstacles.

2 sets of interchangeable handles are included to accommodate wrist mobility. The handlebar grip style may be more suitable for users experiencing difficulty with wrist supination. Attach the handles to the velcro strips on either side of the board.

Each base attachment is ranked from easiest to hardest, labeled 1-4. The different bases require more or less hand control accordingly. Begin with the appropriate level, and as it becomes easier, advance to the next level for progression. Attach the base to the velcro circle on the bottom of the board.

Collaborative gameplay:

Grab a partner and have each person hold 1 handle. Work together and communicate to maneuver through the elements of the board
