

# THE CLIMATE CLOUD

John Brown + Rishi Patel

The Climate Cloud releases water vapor to create a high humidity microclimate which allows visitors of Bonnet Spring Park to experience being immersed in a cloud. The model uses atomizers to vaporize water to create a cloud. The cloud and atomizers are contained in a collection of paper mache balloons in the iconic shape of a cloud. The Climate Cloud atomizes water stored in the paper mache to create vapor which is dispensed from the cloud.
